Avionics Leaders Dynon and Trig Announce Merger

Edinburgh, Scotland – Thursday, May 1, 2025 – Trig Avionics is pleased to announce a new chapter in its growth through a strategic investment from Dynon Avionics, a U.S.-based leader in avionics systems for light aircraft. This investment brings Trig into the Dynon Group of companies and strengthens a long-standing partnership between the two innovators in general aviation.

Trig Avionics is a European manufacturer of avionics, with a focus on transponders and other radio-based products. Trig Avionics has earned a reputation for designing and manufacturing high-quality, compact, and energy-efficient avionics. Since its founding in 2004, Trig products have been trusted by pilots across a broad spectrum of general aviation aircraft, from light aircraft to helicopters and gliders.

For many years, Trig has supplied Dynon with private-labelled radio transceivers and transponders that integrate seamlessly into Dynon's SkyView and Advanced product lines. This strategic move deepens that collaboration, allowing the two companies to align more closely and deliver an even broader range of avionics solutions to customers around the world.

"We are pleased to be joining forces with Dynon Avionics," said Andy Davis, CEO of Trig Avionics. "Dynon is a world leader in avionics innovation, and we believe that our combined expertise will allow us to develop even better products for our customers. We look forward to a bright future together."

The Dynon Group, now including Trig Avionics, will continue its mission to bring cutting-edge, reliable, and affordable avionics to general aviation. The combined entity will be led by Brad Thurow, who has been appointed President of Dynon Avionics. Previously Vice President of Engineering, Mr. Thurow joined Dynon four years ago as part of a planned succession strategy. Robert Hamilton, Dynon's long-time President, will take on the role of Chief Operating Officer.

"We are excited to welcome Trig to the Dynon family," said Brad Thurow, President of Dynon Avionics. "Trig is a well-respected brand in the aviation industry, with products that are known for their quality and reliability. This partnership strengthens our ability to deliver integrated and innovative avionics solutions for the GA community."

This partnership marks a significant milestone for the companies: it will allow the combined enterprise to accelerated innovation, expanded product offerings, and enhanced support for pilots around the world.
